

# Technical Data Sheet epple 37

Sealing compounds // Adhesives // Cast resins

## **Description:**

epple 37 is an one-component, solvent-containing sealing compound on the basis of copolymers. The sealant provides very good adhesive strength to metals and different plastics and it remains elastic at temperatures of up to 120  $^{\circ}$  C. Gradual curing takes place with temperatures to up to max. 400  $^{\circ}$  C.

#### Field of application:

Sealing of joints.

epple 37 is used for waterproofings under heavy thermal stress, e. g. for high-performance engines, turbines, drying plants and in kiln engineering. It can furthermore be applied as sealant to flanges, cast iron pipes, drying drums, metal chimneys and to gears. Possible applications: flanges on cast iron pipes, drying plants/enamelling lines, metal chimneys, bakery equipment, gears, screw connections/surfaces (at high temperature).

## Specific properties:

epple 37 is silicone-free and of remarkably high temperature resistance.

#### Application / surface:

- > The surfaces of the assembly components have to be clean and free from dust and grease.
- > If possible, stir-up the sealing compound before use.
- The skin formation time at ambient is of 15 minutes.

#### Cleaning of tools:

Thinner epple 13.

#### Packaging unit:

Cartridge, metal-tin.

| Basis / characteristics |         |              |        |             |  |  |  |
|-------------------------|---------|--------------|--------|-------------|--|--|--|
| solvent-containing      | aqueous | solvent-free | curing | duroplastic |  |  |  |

#### Properties of the liquid sealing compound **Property** according to Standard Value Viscosity DIN EN ISO 3219 10 Pas (tin) 50 Pas (cartridge) Density DIN 53479 1,38 g/cm3 (tin) 1,51 g/cm³ (cartridge) Colour grey Solid content 72 % (tin) 79 % (cartridge) 12 months in closed original containers, stored in a dry and cool but frost-free Storage place (ideal storage temperature: 5 - 30 °C).
